

Anmol Pandey

Mumbai, India | P: +91 9112441342 | [Mail](#) | [Portfolio](#) | [Github](#)

OBJECTIVE

I'm an AI & ML student who genuinely enjoys building things — from AI agents that automate my own workflows to RAG applications powered by vector search. Looking to bring that same hands-on curiosity to an AI Engineering Internship where I can work with LLMs, agents, and real product teams from day one.

EDUCATION

MUMBAI UNIVERSITY

Bachelor of Engineering
Major in Artificial Intelligence and Machine Learning
Minor in CyberSecurity
Cumulative CGPA: 8.84/10
Relevant Coursework: Software Engineering; Algorithms; Artificial Intelligence

Mumbai, India
Expected May 2027

MATRIX ACADEMY SCHOOL

Secondary and Higher Secondary Education (10th & 12th Standard)
10th Grade (SSC): 80%
12th Grade (HSC, Science Stream): 73.2%

Mumbai, India
2011 - 2023

SKILLS

Programming Languages: Python, Java, C++, JavaScript, TypeScript

Web Development: HTML, CSS, JavaScript, React, Node.js, Flask

Database Management: MySQL, MongoDB

Testing & APIs: Playwright, Postman, RESTful API design & integration

Tools & Technologies: Git, Docker, CI/CD, Visual Studio Code, Jupyter Notebook, GitHub, Linux command line

Generative AI & LLMs: LangChain, LangGraph, RAG, embeddings & vector databases (FAISS, ChromaDB), AI agents, Prompt engineering, tool/function calling, chatbot development, AI coding tools

Cloud Technologies: Familiarity with cloud platforms (AWS, Azure, and GCP)

PROJECTS

[This Week in AI](#) — Automated Newsletter Platform (Python, Gemini API, GitHub Actions, Cloudflare Workers)

- Built an end-to-end automated newsletter agent covering 5+ AI news sources, measured by consistent weekly delivery with no manual curation, by designing a Python/BeautifulSoup/feedparser scraping pipeline that filters content within a rolling 7-day window.
- Generated publication-ready newsletter copy, measured by zero manual editing before send, by integrating the Gemini API with structured prompts and automated parsing into responsive HTML email templates.
- Automated the full send pipeline, measured by fully hands-off weekly broadcasts, by scheduling cron-based GitHub Actions with a self-preview/delay safety step before sending to subscribers.
- Streamlined subscriber onboarding, measured by a fully serverless signup-to-welcome-email flow with no manual list management, by building a Cloudflare Worker + GitHub repository_dispatch webhook connected to a custom-domain signup page (HTML/CSS/JS, GitHub Pages).

[CalendarAgent](#) — AI-Driven Gmail Task Orchestrator (Python, Gemini 2.5 Flash, Gmail API, Google Calendar API)

- Built an autonomous AI agent that eliminates manual assignment tracking, measured by fully hands-free daily operation with zero missed items, by orchestrating a Gmail API → Gemini 2.5 Flash → Google Calendar API pipeline using scheduled tool/function calls.
- Improved assignment-capture accuracy, measured by correctly distinguishing new assignments from announcements, grade updates, and comments, by designing a classification prompt with Gemini 2.5 Flash and defaulting to a 6-day due date when none is specified.
- Reduced missed deadlines, measured by automatic 2-hour pop-up and 24-hour email reminders plus real-time push alerts, by integrating Calendar event creation with ntfy.sh notifications.

- Ensured continuous unattended execution, measured by reliable 8 AM IST daily runs with no manual intervention, by automating the agent via GitHub Actions with Base64-encoded OAuth credentials stored as secrets — using AI coding tools throughout development to speed up iteration.

T&C Guardian — AI Chrome Extension (React 19, Node.js/Express, OpenRouter AI, Chrome MV3)

- Built an AI-powered Chrome extension that analyzes Terms & Conditions in real time, measured by structured, consistent legal breakdowns (summary, red flags, good points) across arbitrary webpages, by engineering a Chrome MV3 messaging pipeline (Popup → Content Script → Backend → AI) with function-style JSON parsing of OpenRouter API responses.
- Delivered a production-ready user experience, measured by graceful recovery from malformed AI outputs and network failures, by implementing JSON error handling, markdown cleanup, and loading/error states in the React UI.
- Shipped a live backend, measured by stable public availability, by deploying the Express server on Railway.

Portfolio Site — RAG-Powered Site Assistant (Python, FAISS, LLM APIs)

- Built a RAG-powered assistant embedded in my portfolio site, measured by relevant, grounded answers to visitor questions about my projects and background, by chunking and indexing portfolio content into a FAISS vector store for retrieval-augmented generation.
